

Hospital Building Project in Myanmar

Local Trades are a major contributor to Hospital Construction

A BIG THANK YOU to the trades and suppliers who contributed to the recent **Remai Charity House Construction Project on Woodbridge Drive!** The house has been sold and the funds have been used to complete 1/3 of the Teaching Hospital Construction. The hospital has an Emergency Room, Operating Theatre, Maternity Ward and General Wards. This is the first facility of its kind in Karen State, Myanmar. Thousands of people in Karen State have no access to Health Care and there are very few trained Health Care Professionals to care for the population. This hospital will meet the medical needs of the local community of 50,000 people, plus train students to bring care to their communities throughout Karen State. They will be trained to Registered Nurse Level. 100% of the funds raised in this project will be used at the hospital.

Solar/Diesel Electrical System

It won't be easy, but it will be worth it
